

Problem:

Cable Assembly twists and stresses not only when aligning the connector and receptacle, but also while in-use.

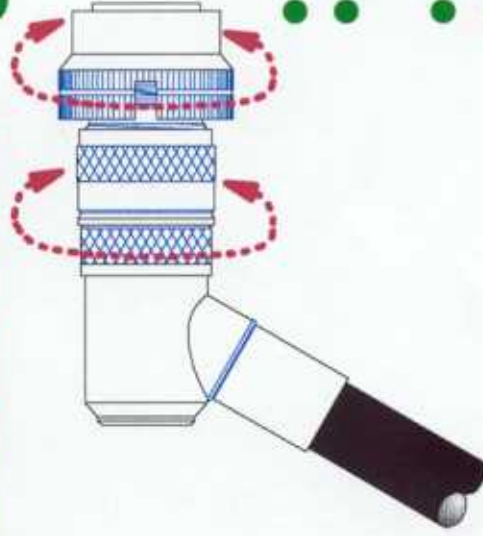

Adapters with Entraco's **SWIVEL** are Low-Profile, and provide an excellent Seal and Conductive path. The **SWIVEL** allows easier Plug-To-Receptacle Clocking Alignment, as well as absorbing Cable Torque, while in-use.

Typical application of SWIVEL:

Sikorsky UH-60A
BlackHawk Tail
Rotor

Solution: **SWIVEL**

- Sealed System
- Excellent Conductive Path
- Absorbs cable torque
- Free clocking
